Mr. James McDonald
Director of Logistics
Central Intelligence Agency
Washington, DC 20505

Dear Mr. McDonald:

In compliance with Executive Orders 11912 and 12003, the General Services Administration (GSA) administers a consolidated Federal fleet average fuel economy program for passenger vehicles acquired by executive agencies. The plan is based on forecasts of total passenger automobile acquisition requirements by vehicle class, for each fiscal year, submitted by executive agencies to GSA on or before December 15, of each fiscal year.

The forecast serves as substantiation that each agency's acquisition plan is in conformance with the required fleet average fuel economy specified in Federal Property Management Regulations (FPMR) 101-38.13. For Fiscal Year 1979, the combined fleet average fuel economy requirement for each agency is 22 miles per gallon (MPG).

Periodically, GSA sends each agency a list of passenger automobiles actually acquired, with the cumulative fleet average fuel economy attained, to compare with its forecast. Accordingly, enclosed is a copy of your Agency's fleet average fuel economy report through May 31, 1979.

Please contact Mr. Peter T. Glading, Acting Assistant Commissioner for Motor Equipment, at 557-8565 should you note any discrepancies or have any questions concerning this report.

Sincerely,

ALLAN W. BERES
Commissioner *Acty*
